VILL OF LLOYD HARBOR
32 MIDDLE HOLLOW RD
HUNTINGTON NY 11743

Dear VILL OF LLOYD HARBOR:

PSEG Long Island contractors will be working in your area for the next three – four weeks inspecting wooden utility poles and helping to further enhance the reliability of the energy system that supplies power across Long Island and the Rockaways.

Utility poles are the backbone of PSEG Long Island's distribution network, delivering electricity to approximately 1.1 million homes and businesses across our service territory. Conducting routine inspections and maintenance on utility poles ensures that your electric system is safe, reliable and resilient.

Specialized contractors, hired by PSEG Long Island, annually inspect more than 35,000 of the approximately 350,000 wooden poles maintained by the utility.

As part of the utility's inspection program, the crews look for signs of wear, insect infestation or damage from motor vehicle accidents. While certainly durable, wooden utility poles periodically need to be replaced or repaired. A standard wooden distribution pole is expected to last more than 50 years. All LIPA-owned wooden poles are inspected and maintained on a 10-year cycle.

Customers with questions about the project can contact PSEG Long Island Customer Service at 1-800-490-0025. As always, customer and employee safety is our primary concern. Please be cautious when travelling near our construction work zones.

Sincerely,
PSEG Long Island
